PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8921

SESSION NUMBER: 001

DATE OF SESSION: 26 June 89

DATE OF REPORT: 26 Jun 89

START: 1315

END: 1410

METHODOLOGY: CRV

VIEWER IDENTIFIER: 095

SG1A

1. (S/NF/SK) MISSION: Report information on status and location, destination, and origin of suspected drug-smuggling vessel. [REDACTED]

2. (S/NF/SK) VIEWER TASKING: Encrypted coordinates 160133/188336.

3. (S/NF/SK) COMMENTS: Search results may be flawed, as viewer appeared to exhibit preconceived preference for Caribbean/Florida area. Search results should nevertheless be evaluated in terms of other known information and other viewer results (i.e., there may be an operational reason for the perceived preference). Some elements of the tasking did not lend themselves readily to use in the CRV methodology. Some thought may need to be given to either a) revision of the taskings to be more easily used in CRV, or b) a special-case modification of CRV methodology, and a subsequent effectiveness evaluation thereof, to better use the tasking as provided.

A further interesting effect was observed in this session. Upon first iteration of coordinates, the viewer produced an AOL that seemed to demonstrate that she was immediately on the signal line; unfortunately, subsequent internal editing--likely as a result of such sudden lock-on to the signal line--then led the viewer astray from the signal line. A possible supposition here is that, in oft repeated and very similar scenarios such as DEA vessel-search taskings, a given viewer may directly and immediately access the target because of frequent repetition of the type of site, and would need to go immediately to S IV, avoiding the intermediate stages to avoid an AOL-Drive situation.

4. (S/NF/SK) EVALUATION:

SUMMARY OF INFORMATION

The contraband is stored in the vessel in a hold below the normal hold, i.e., below what is normally considered the bottom. Moisture is a fear. Steps were taken to make storage containers airtight and watertight. After preparation or when used the contraband is/was mixed with a chemical that evaporates off. The contraband was refined.

The vessel is currently experiencing rocky side-to-side motion and is within sight of a rock-faced coast (see sketch page 10).

The current location is a position to the southeast of the Dominican Republic. Its original location was just south of Tobago. The final destination of the vessel is an long (n-s oriented) island due east of Lake Okeechobee. A weaker feel was a location on the coast of Florida directly south of Tallahassee.

The name of the vessel at its final destination has five letters and is sketched on page 11. (FARIE)
